Walk off track to join main ascent

Grade 25 85m amazing pitch

Grade 24 17m sport 6 draws

Grade 23 10m

Grade 22 17m sport 6 draws

Single bolt potential belay

Belay

Grade 19 35m or two 1.35-17m pitches

Grade 15 15m

Grade 20 55m

Solo to ledge and single ring belay

Notes

Straight Out of Lock Down

25 175m

Karl Merry Schimanski , Daniel Joll May 2020

Gear

12 x draws

Single green c3

2 x sets nuts , 2 x cams red c3 – 3 and single #4 camalot. Maybe take triple .75 – 1 if linking pitches 3-4. (not essential if your feeling solid at the grade)

The climb out of the water is very easy.

Pitch one 20, 45m, move right off the single bolt belay. Up crack for 5m then move left to join the nice crack line. (do not go straight up the crack that splits the roof above as its loose) belay on sloping ledge or link with pitch 2 and belay at the base of the pillar.

Pitches three -m four 23, 35m climb as a single pitch or belay on small sloping ledge mid height. At the top of the crack move left past single bolt to double bolt belay on the edge of the prow. A wild stance and an awesome pitch. Move five meters through bush to the base of the next pitch. Being careful not to fall in the hole at the base of this pitch.

Pitch five 25, 17m, six bolts Stick clip or stand in sling off the belay bolt and pre clip the first bolt. Crux is off the deck then the climbing eases to a small sting at the end of the pitch.

Pitch six 19, 10m Trad with one bolt. We un earthed this pitch from the jungle but it should clean up well with some rain. Move up and left to a great stance and double bolt belay.

Pitch seven 24, 17m six bolts

Pitch eight 25, 35m the money pitch . This is the pitch of the climb. Amazing overhanging crack climbing. Save a number 1 nut and .4 cam for the final moves. Stunning.

Exit into the bush by climbing up past a bolt to a tree belay then walk out. You may want a rope on for the walk up to the track. It's a bit exposed through the bush but we cut the track fairly well.

Take a brush as you may want to clean a hold or two. In general the rock is solid and clean. This route dries much faster than the main face and the rock is allot more solid.
